Meta Resident Introduction

Meta Resident

The birth of
Meta Resident

Meta Resident

DAOs open up a new paradigm for democratic governance and organizational coordination of people with similar interests and values.

2022 is the first year of DAO, which is already a market consensus.

Therefore, at the core of our vision is to be a DAO of the latest paradigm and to help DAO members enter the metaverse era

Available   **Know**   **Reliable**   **Controllable**

Meta Resident introduce

Meta Resident (MR) is a BSC-based Decentralized Autonomous Organization (DAO) protocol, which belongs to a new organizational form of operating system.

MR is the world's first Defi 2.0 application DAO protocol based on the great autonomous community, and it can expand and link the entire ecology of the Defi layer 2 financial protocol in the future. The goal of the birth of MR is to rebuild the security and trust of the community, gather the strength of each member to accomplish a goal together, integrate the imagination of talents in the blockchain field, and bring considerable benefits to each DAO member to maximize Social value.

Meta Resident
Feature

10,000 times plan to help development

On the way to the world's largest metaverse DAO, we must build a close community of DAO contributors, members and the core MR team work together to operate the network, the ecology will give members excess benefits, we call this plan: MR million times plan.

1

2

3

WEB3 Core Spirit

MR has the core spirit of Web3: positive, transparent, and win-win. MR coordinates the network through true ownership of contributors' work and community relations. More and more people will choose to join, and the entire ecosystem will grow stronger and stronger.

Ecological landing metaverse

There are various indications that the value of games in the Metaverse and the game economy is generally optimistic about the industry. In the MR's 10,000-fold plan, the Metaverse Chain Tour is the absolute core segment of the application period, and the future MR ecology will be opened by the Metaverse.

How to Become a Meta Resident DAO Member

Meta Resident

Members' LP pledge weight affects the amount of dividends and voting rights

In the MR ecology, each DAO member needs to purchase MR from the PancakeSwap liquidity pool, inject MR/BNB liquidity, hold the LP liquidity certificate and pledge it into the DAO protocol, and then be activated as a formal MR ecological member with voting rights , casting rights and dividend pool rights.

LP Staking

**Buy MR
inject liquidity**

02

Meta Resident
Economic Model

Meta Resident

The initial total of MR tokens is 10,000

Meta Resident

20% 2000 pieces

After the issuance of MR tokens, there are 2,000 whitelisted IDOs, and the issuance price is 15U.

80% 8000 pieces

8000 tokens will be directly put into the PancakeSwap trading pool MR/BNB at a price of 20U, then the contract ownership will be discarded and the liquidity pool will be locked.

MR Token 10,000

ecological slippage

After MR is issued, a dynamic distribution strategy will be created, that is, transaction slippage in the conventional sense. The system will determine the amount of MR distribution based on some variables to promote the ecological positive game.

Meta Resident Eco Slippage 5%

Meta Resident

2%

DAO Dividend Pool 2%

The DAO dividend pool distributes dividends to DAO members according to the LP pledge weight ratio

2%

Deflation burns 2%

Deflation burning 2% can ensure the continuous deflation of MR ecology until 2100 pieces

1%

DAO Vault 1%

DAO Vault is used for MR ecological growth and ecological expansion

Meta Resident Ecological Benefits

**Meta Resident**

01
Liquidity gains

The process of becoming a DAO member will also allow yourself to become a liquidity provider for MR and gain liquidity benefits
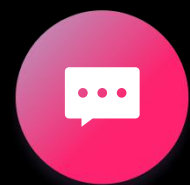

02
Slippage dividend income

2% of the transaction volume of the liquidity pool will enter the slippage bonus pool, and this part will be allocated to DAO members

03
10,000 times plan income

All DAO members who develop with the MR ecosystem can enjoy the benefits of holding MR tokens
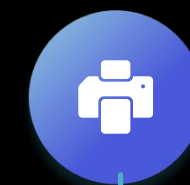

04
Application ecological benefits

MR Ecology, through a huge community, has obtained ecological dividends for project development after landing various Metaverse chain game projects.

05
Cooperative Airdrop Proceeds

In the future, many projects that cooperate with MR will also distribute dividends through the dividend pool.

03

Meta Resident
10,000 times plan

Meta Resident
# 10000 times plan introduction

Meta Resident

Phase one

The market value in the early stage was low, with a market value of only 200,000 US dollars. Each DAO member needs to purchase MR tokens, and then feed them back into the liquidity pool to obtain LPs to become full members, adding a lot of capital to the liquidity pool, plus 2% continuous deflation and destruction, ensuring the generation of When the token is deflated to 2100, the token price will continue to rise. The token price will be 100 times higher from 20U to 200U and then to 2000U after the Swap transaction is opened. At this time, it belongs to the growth period of the development dividend of MR, and everyone can quickly profit from it. Just to strengthen the ecology

Team Guarantee

The MR team members are located in Dubai and have the resources of the whole industry chain. The members are very good at global community operations. In the future, they will actively promote cooperation with world-renowned exchanges and the implementation of the Wanxian plan.
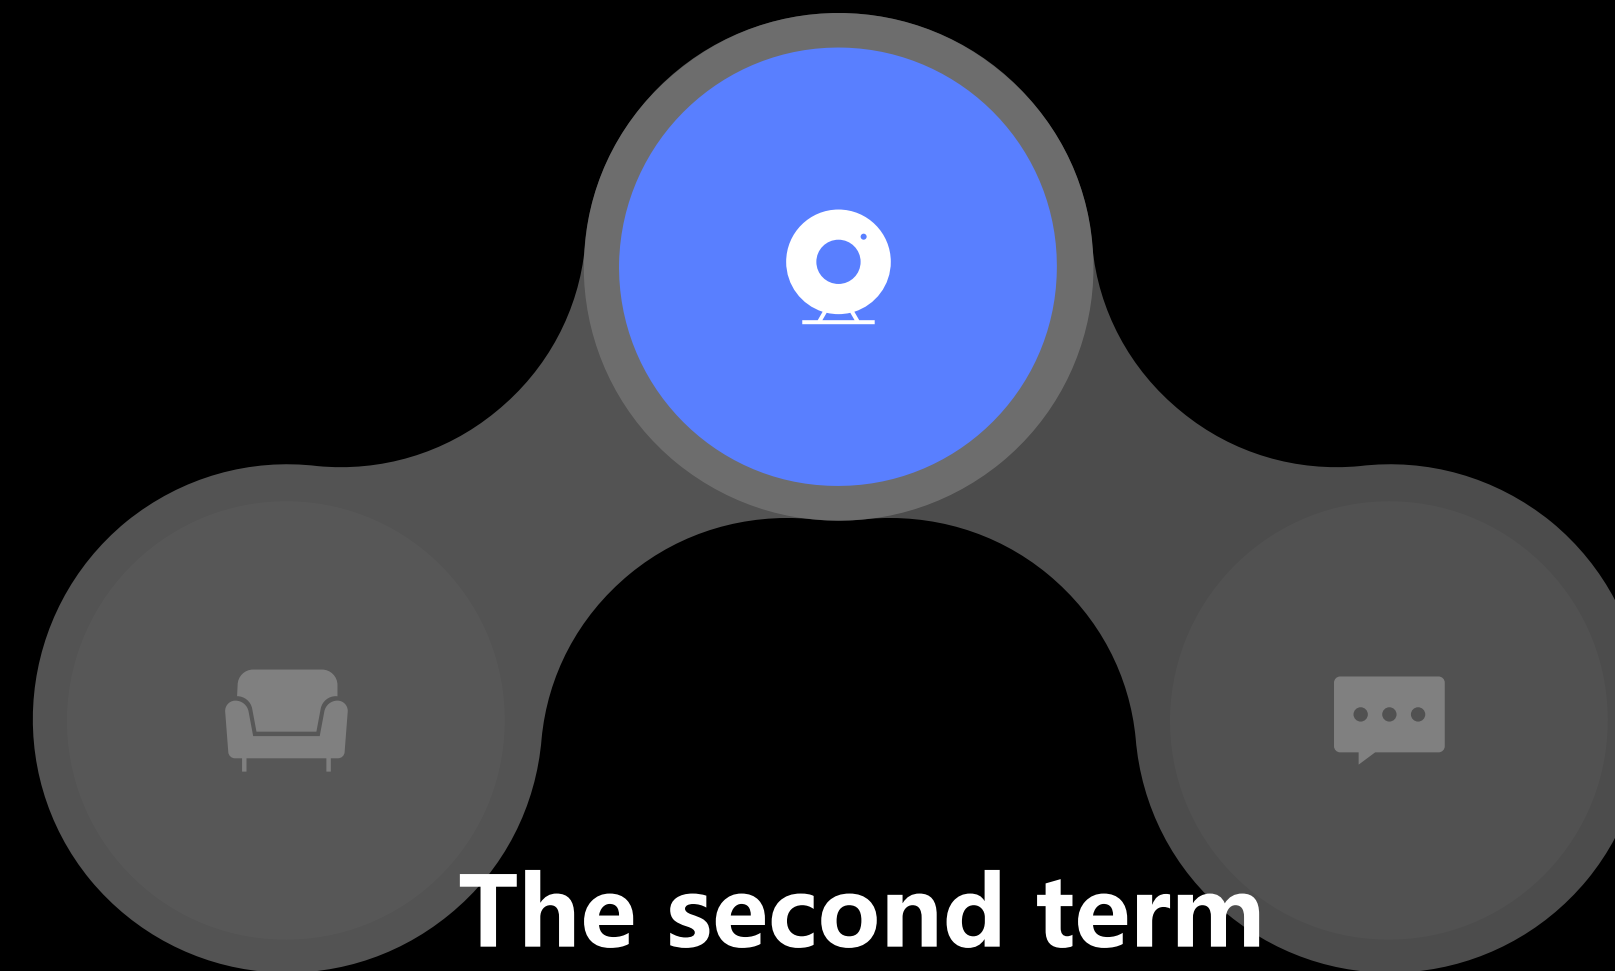

The second term

Through the implementation of a large number of metaverse chain games to develop the ecology, each project will mint application coins, which will be presented in the form of MR01, MR02, MR03... .

Example: You have 2 MRs, each 2000U, worth 4000U, split and exchanged for 20,000 application coins MR01, each 0.2U starts to enter various applications such as chain games, NFT, Metaverse, and DeFi (detailed in the ecological application chapter).);

The currency price from 0.2U to 2U is 1000 times, and then to 20U is 10,000 times
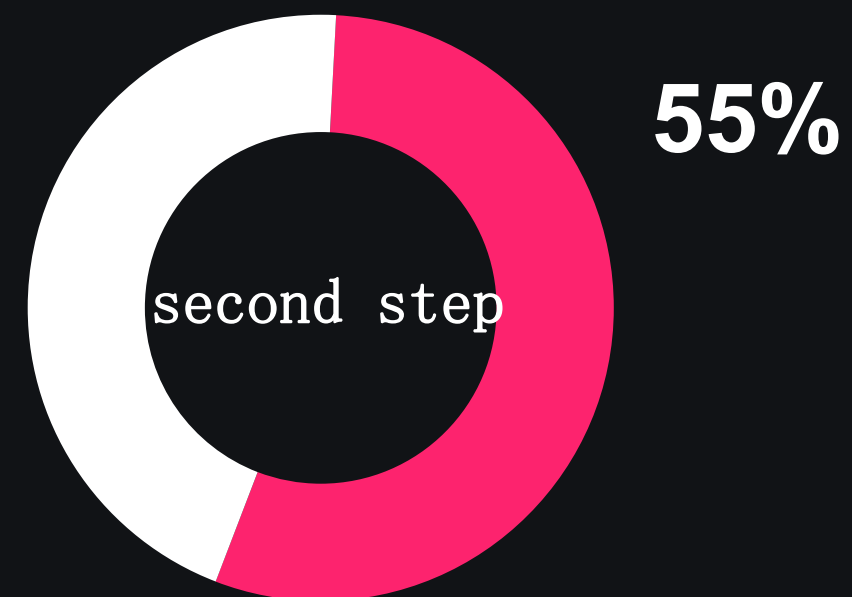

Meta Resident
10,000 times plan progress planning

25%

first step
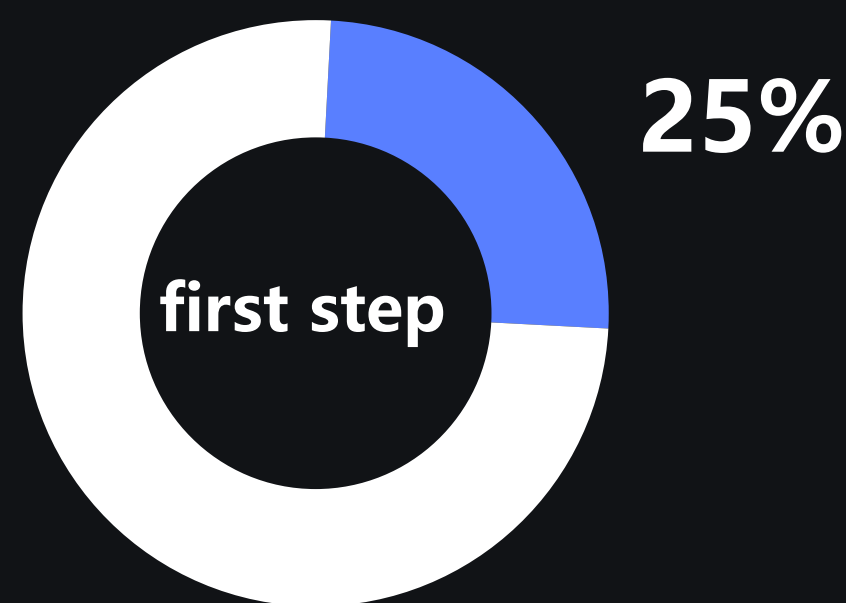

Governance coin MR launched

Every DAO member needs to buy MR tokens
Injecting liquidity into the flow pool to feed back the ecology
Continuous market value management guarantee
Coins all the way up

55%

second step

Persistent deflation

Countless transactions all the time
2% Guaranteed Destruction
The flow pool continues to destroy MR
Decided that MR has been deflationary and appreciation

70%

third step
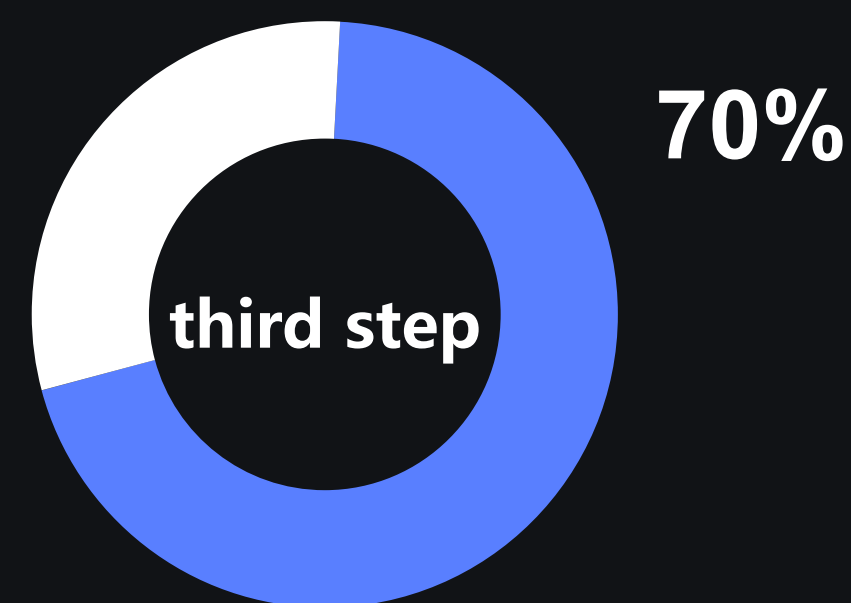

Minting App Coins

After deflation to 2100, the ecosystem will start to develop
Initiate a proposal to mint application coins
Minting application coins MR01, MR02...
Metaverse chain game application landing period

100%

fourth step

Application period burst

During the application period, a large number of Metaverse projects landed
Suppose MR is 2000U
The landing application will enter the market with 0.2U
The coin price of the metaverse ecological explosion will increase from 0.2U
All the way up to 20U to reach 10,000 times
Meta Resident
Metaverse Chain Games mints application coins

Meta Resident

Chain game application landed and minted application currency

In the planning of MR's ecological application, the metaverse chain game occupies an absolute core position. In the future, the core assets of each chain game will be minted in the form of MR01, MR02, MR03, etc., and all of these will be released. It is up to the DAO members to decide.

Technology Architecture

Meta Resident
Technical Proposal

Meta Resident

Proposal
Decisions are initiated by proposals. Proposals are submitted by proxies and then voted "Yes" or "No"

Error Correction
Avoid the ultimate attack, the end period interval cannot change the decision

Meta Resident Proposal System

Reputation
A proxy's votes are weighted by their reputation

Stack
Only a limited number of proposals can be opened at each point in time

Time
Once a proposal is opened, it has a limited closing time

Boost
Any member can boost proposal ranking

Meta Resident
Technical Highlights

Meta Resident

About the proposal

01 This is the core module of DAO

About reputation

03 Perfect reputation system Guarantee the rights and interests of MR ecological members

About regulation

**02** MR surveillance system All kinds of accidents in the ecology will be avoided

Protocol upgrade

04 With the ecological development Support MR ecological upgrade to a new architecture

Meta Resident
Future development route

Meta Resident

2022. First quarter

Meta Resident project technology research and development started, early ecological construction、IDO and the first phase of the 10,000 times plan started

30%

40%

The basic framework of the Meta Resident project has been completed, the early ecological construction has begun to take shape, and the 10,000-fold plan is progressing smoothly

2022. Second quarter

2022. Third quarter

The technology of the Meta Resident project is complete, the first phase of the 10,000 times plan was successful, the Metaverse ecosystem was launched, and the cooperative airdrop was launched

50%

70%

The Meta Resident project has developed into an industry leader, the second phase of the 10,000 times plan has been launched, the Meta Resident ecosystem has gradually landed, and coinage has been launched

2022. Fourth quarter

2023

The Meta Resident project Metaverse chain game project has been implemented on a large scale, DAO members have grown and grown, and the 10,000 times plan is about to be completed

90%

Meta Resident
Proposal example

Meta Resident

01

The agent submits a proposal to the DAO, and a user contributes to the 10,000 times plan, and uses the dividend pool to reward its agent with 10 MR tokens to reward its contribution to the MR ecosystem.

A Simple
Rewards Scheme
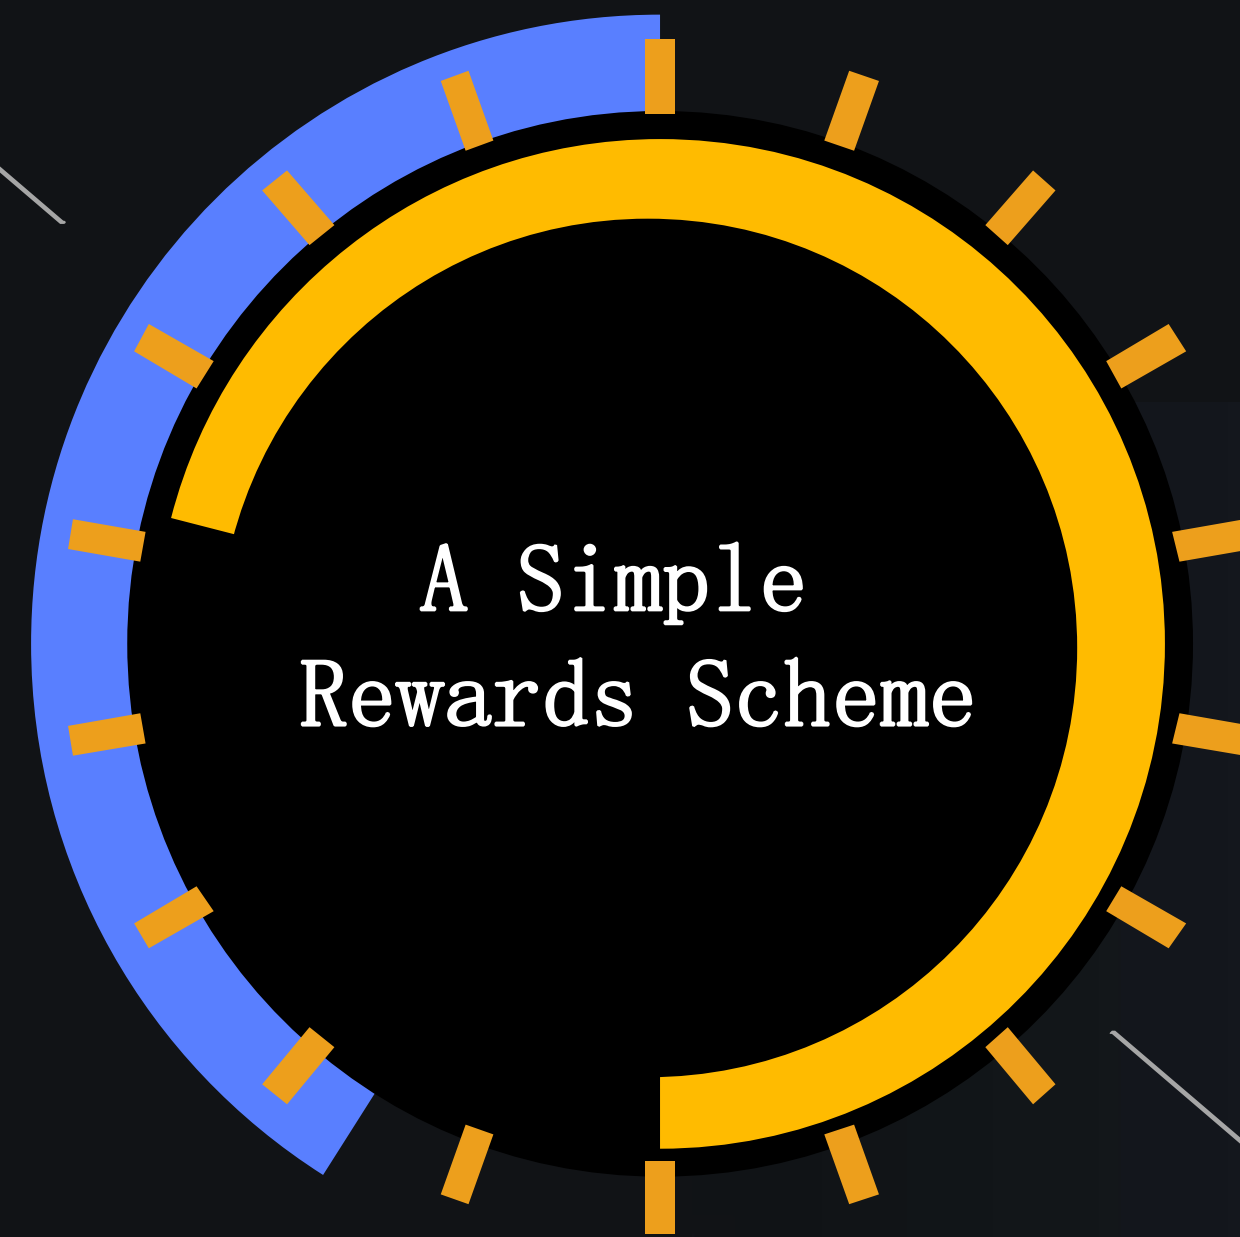

02

Anyone can vote for or against this proposal, weighted by their DAO reputation (LP credentials).

**Once a majority of DAO members have voted in favor,
The DAO's operating system will implement the proposal,
And distribute 10 MR tokens to contributing agents.**
